Skills

Software and programming language

- GIZMO: Performed and analyzed simulations of gravitational-wave driven LISA massive black hole binaries embedded in accretion disk
- lisabeta: Added several waveform modules. Also, experienced user and frequently edits it to suit a given project's needs. It provides a complete LISA response and Bayesian inference primarily using the ptmcmc sampler.
- Eryn: I have performed reversible jump MCMC with this sampler in lisabeta.
- Mathematica: Frequent user to do analysis and plotting.
- Python: I mainly use this programming language to perform analysis and make plots.
